FACT SHEET: Launching the Data-Driven Justice Initiative: Disrupting the Cycle of Incarceration

“[O]ur criminal justice system isn’t as smart as it should be. It’s not keeping us as safe as it should be. It is not as fair as it should be.

Mass incarceration makes our country worse off, and we need to do something about it.” –

President Barack Obama, July 14, 2015

U.S. CITY OPEN DATA CENSUS

Description

Salt Lake City Police Department incident dataset

**How do you use all this data
to make the world better?**

**Analyze it and
uncover insights!**

(and take this class!)

What is "statistics"?

Collecting and analyzing data from a representative sample in order to make inferences about a whole population

What is "data science"?

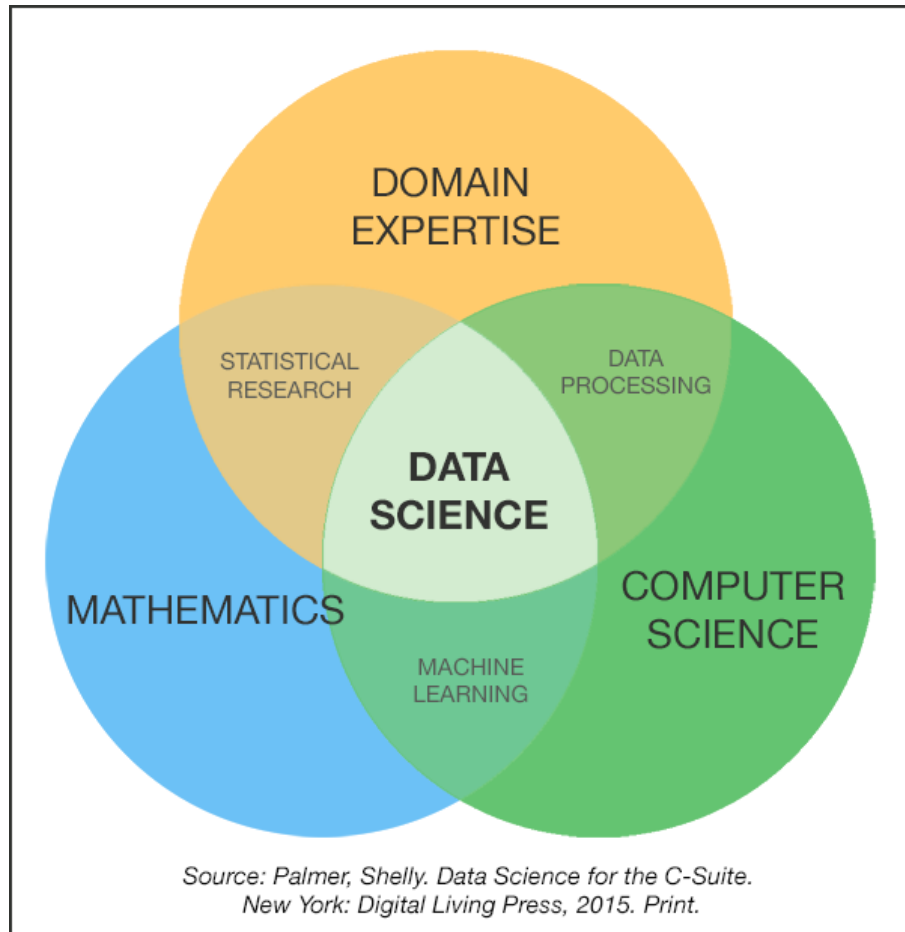

Turning raw data into
understanding, insight,
and knowledge

Collect

Analyze

Communicate

What's the difference?

Collect

Analyze

Communicate

What is "program evaluation"?

Measuring the effect of
social programs on society

Data science
(data + statistics +
communication)

Causal inference
(DAGs + econometrics)

Evidence, evaluation, and causation

Evidence-based medicine

Modern evidence-based medicine

**Apply evidence to clinical
treatment decisions**

**Move away from clinical judgment
and "craft knowledge"**

Is this good?

Evidence-based policy

RAND health insurance study

Oregon Medicaid expansion

HUD's Moving to Opportunity

Tennessee STAR

Policy evidence industry

Jameel Poverty Action Lab (J-PAL)

Campbell Collaboration

Should we have evidence for every policy or program?

No!

Science vs. art/craft/intuition

Ellie Murray

@EpiEllie

Where does program evaluation fit with all this?

It's a method for collecting evidence for policies and programs

Types of evaluation

Needs assessment

Design and
theory assessment

Process evaluation
and monitoring

Impact evaluation

Efficiency evaluation (CBA)

* Because 11th and 12th graders who receive 3rd citations are generally unable to graduate from high school, district social workers no longer attempt to increase their commitment to school. As such, any outcomes that occur as a result of the alternative plans made for these students (work study programs, career development assistance, etc.) are only tangentially related to the outcomes of the truancy program itself. The system for creating alternative plans is an entirely separate program with its own logic model, goals, and outcomes.

Theories of change

Impact evaluation!

Impact Evaluation in Practice

SECOND EDITION

Paul J. Gertler, Sebastian Martinez,
Patrick Premand, Laura B. Rawlings,
and Christel M. J. Vermeersch

Theory → impact

Godwin's law

From Wikipedia, the free encyclopedia

Godwin's law (or **Godwin's rule of Hitler analogies**)^{[1][2]} is an Internet **adage** asserting that "as an online discussion grows longer, the probability of a **comparison involving Nazis or Hitler approaches 1**".^{[2][3]} That is, if an online discussion (regardless of topic or scope) goes on long enough, sooner or later someone will compare someone or something to **Adolf Hitler** or his deeds, the point at which effectively the discussion or thread often ends.

Promulgated by the American attorney and author **Mike Godwin** in 1990,^[2] Godwin's law originally

Godwin's Law for statistics

**Correlation does not
imply causation**

Except when it does

**Even if it doesn't,
this phrase is useless
and kills discussion**

SCIENCE

The Internet Blowhard's Favorite Phrase

Why do people love to say that correlation does not imply causation?

By DANIEL ENGBER

OCT 02, 2012 • 8:33 AM

Not everyone found the news believable. “Facepalm. Correlation doesn’t imply causation,” wrote one unhappy Internet user. “That’s pretty much how I read this too... correlation is NOT causation,” agreed a Huffington Post superuser, seemingly distraught. “I was surprised not to find a discussion of correlation vs. causation,” cried someone at Hacker News. “Correlation does not mean causation,” a reader moaned at Slashdot. “There are so many variables here that it isn’t funny.”

Correlation vs. causation

How do we figure out correlation?

How do we figure out causation?

Correlation vs. causation

How do we figure out correlation?

Math and statistics

How do we figure out causation?

Correlation vs. causation

How do we figure out correlation?

Math and statistics

How do we figure out causation?

Philosophy. No math.

John B. Holbein @JohnHolbein1 · Apr 7
Causality isn't achieved; it's approached.

Show this thread

John B. Holbein @JohnHolbein1 · Apr 7
Causality isn't binary; it's a continuum.

Show this thread

How do we know if X causes Y?

X causes Y if...

**...we intervene and change X
without changing anything else...**

...and Y changes

Y "listens to" X

"A variable **X** is a cause of a variable **Y** if **Y** in any way relies on **X** for its value.... **X** is a cause of **Y** if **Y** listens to **X** and decides its value in response to what it hears"
(Pearl, Glymour, and Jewell 2016, 5–6)

Y doesn't necessarily listen only to **X**

A light switch causes a light to go on, but not if the bulb is burned out (no **Y** despite **X**), or if the light was already on (**Y** without **X**)

Causal relationships?

Lighting fireworks causes noise

Rooster crows cause the sunrise

Getting an MPA/MPP increases your earnings

**Colds go away a few days
after you take vitamin C**

Causation

**Causation =
Correlation + time order +
nonspuriousness**

How do you know if you have it right?

You need a philosophical model

That's what this class is for!

The causal revolution

Causal diagrams

Directed acyclic graphs (DAGs)

Graphical model of the process that generates the data

Maps your philosophical model

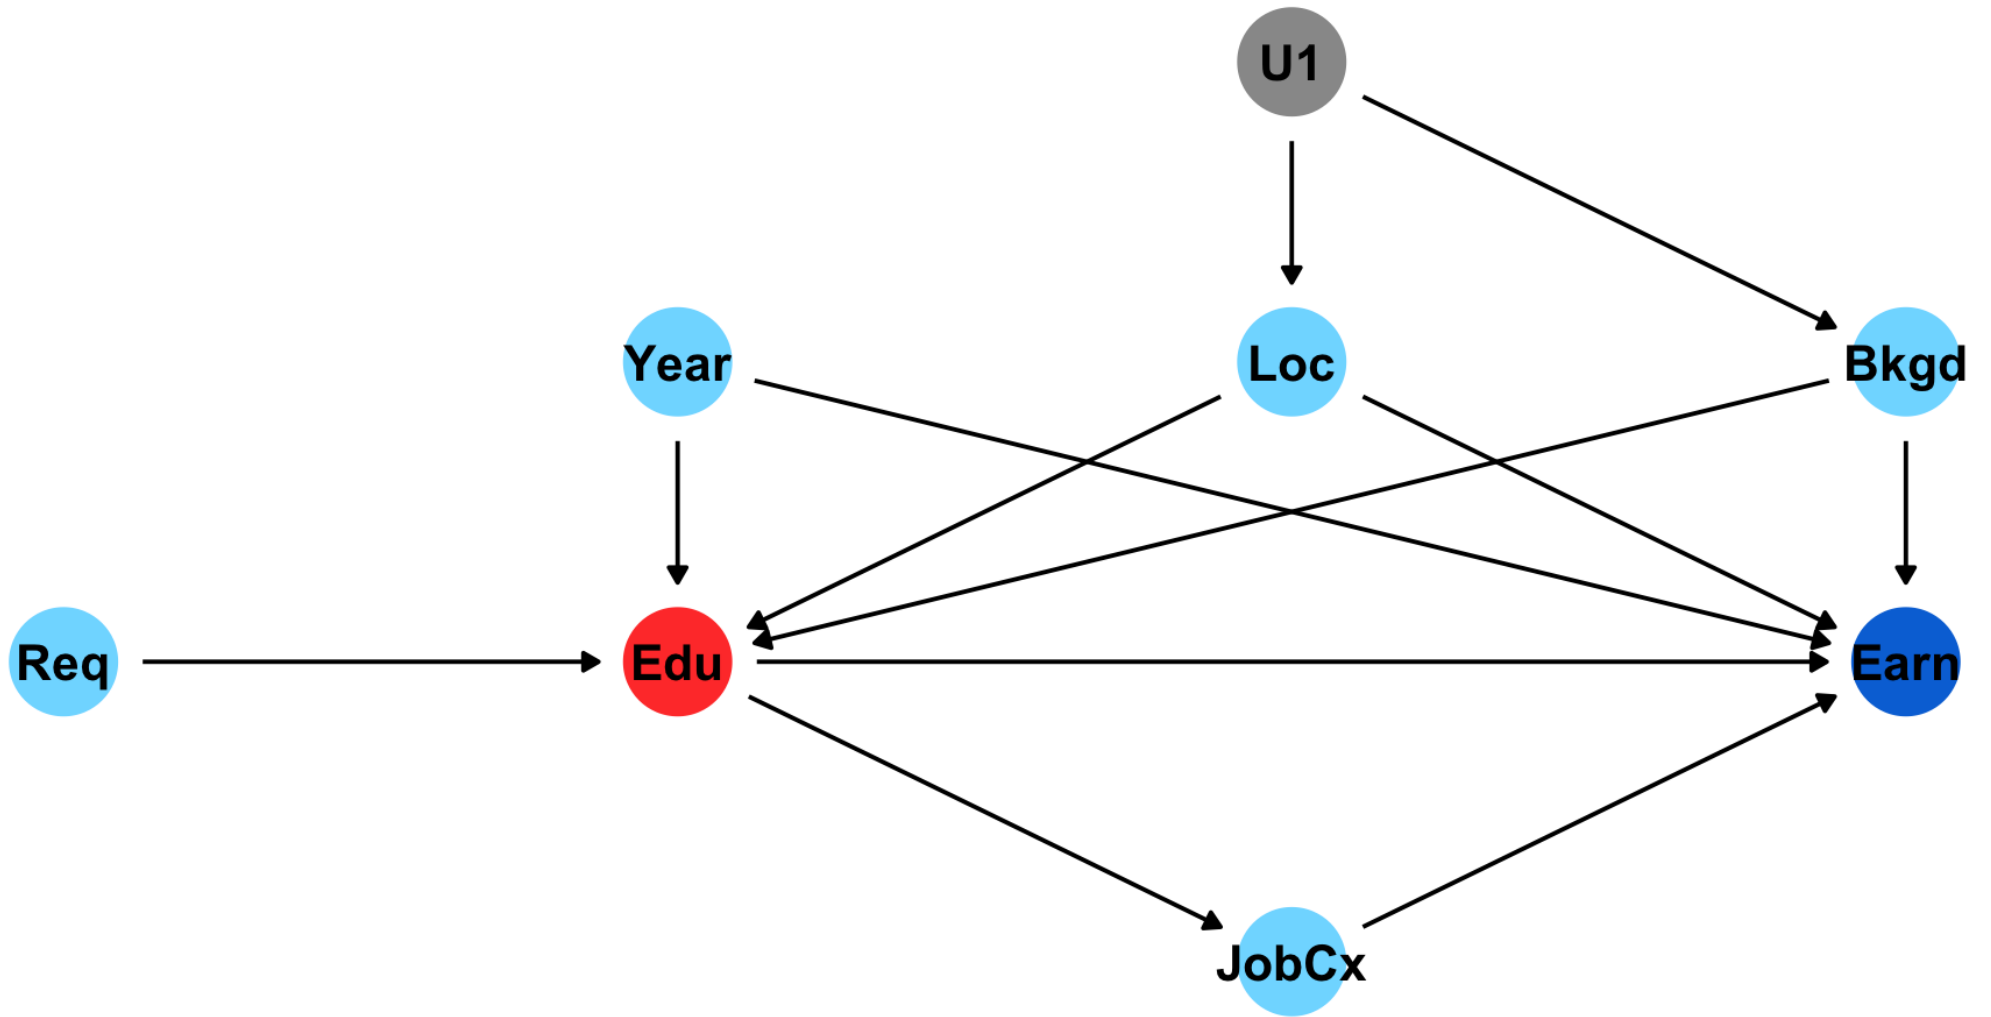

Fancy math ("*do*-calculus") tells you what to control for to isolate and identify causation

NYT Health
@NYTHealth

Want to live longer? Try going to the opera. Researchers in Britain have found that people who reported going to a museum or concert even once a year lived longer than those who didn't.

Another Benefit to Going to Museums? You May Live Longer

Researchers in Britain found that people who go to museums, the theater and the opera were less likely to die in the study period than those who didn't.

Class details

Plan for the class

Textbooks

Stage 1: Regress each column of \mathbf{X} on \mathbf{Z} , ($X = Z\delta + \text{errors}$):

$$\hat{\delta} = (Z^T Z)^{-1} Z^T X,$$

and save the predicted values:

$$\widehat{X} = Z\hat{\delta} = Z(Z^T Z)^{-1} Z^T X = P_Z X.$$

Stage 2: Regress \mathbf{Y} on the predicted values from the first stage:

$$Y = \widehat{X}\beta + \text{noise},$$

which gives

$$\beta_{2SLS} = (X^T P_Z X)^{-1} X^T P_Z Y.$$

```
model_2sls <- iv_robust(  
  health ~ bed_net | treatment,  
  data = bed_nets)
```

Class technology

The tidyverse

The tidyverse

R code, but reads like English!

```
strike_damages_month <- bird_strikes %>%  
  group_by(Month) %>%  
  summarize(total_damages = sum(Cost, na.rm = TRUE),  
            average_damages = mean(Cost, na.rm = TRUE))  
  
ggplot(data = strike_damages_month,  
       mapping = aes(x = Month, y = total_damages)) +  
  geom_col() +  
  scale_y_continuous(labels = dollar) +  
  labs(x = "Month",  
       y = "Total damages",  
       title = "Really expensive collisions happen in the fall?",  
       subtitle = "Don't fly in August or October?",  
       caption = "Source: FAA Wildlife Strike Database")
```

Sucking

“There is no way of knowing nothing about a subject to knowing something about a subject without going through a period of much frustration and suckiness.”

“Push through. You’ll suck less.”

Hadley Wickham, author of `ggplot2`

(It's Great to) Suck at Something

By Karen Rinaldi

April 28, 2017

Karen Rinaldi, "(It's Great to) Suck at Something"

Am I making you computer scientists?

No!

You don't need to be a mechanic to drive a car safely

**You don't need to be a computer scientist
or developer to use R safely**

Learning R

Jesse Maegan

@kierisi

Following

My **#rstats** learning path:

1. Install R
2. Install RStudio
3. Google "How do I [THING I WANT TO DO] in R?"

Repeat step 3 ad infinitum.

7:19 AM - 18 Aug 2017

You can do this.

Goals for the class

~~Become an expert with R~~

Speak and do causation

Design rigorous evaluations

Change the world with data

Prerequisites

Math skills

Basic algebra

Computer science skills

None

Statistical skills

Regression, differences in means, and statistical significance
